

NetBox Blue

"...the Swiss Army knife of IT security and management solutions, trustworthy, reliable and indispensable!" *Enex Testlab Report*

NetBox Blue is a leading provider of managed internet security for SMEs. Astonishingly convenient to deploy and manage, the products give our users productivity gains, savings, and complete security for their critical Internet connectivity. The NetBox allows customers to focus on their business rather than on their critical security processes.

Providing simple and low cost expansion and upgrade options, the NetBox will take care of your Internet connection now and in the future. When connected to your computer network the NetBox provides high quality Internet security protecting your entire organization from external threats.

What can the NetBox do for you?

Lower Your Costs & Improve Your Productivity

- By reducing spam by 99%
- By reducing offensive material & viruses through email
- By having instant email delivery using the NetBox as a mail gateway
- By managing and prioritizing services on a network connection
- By providing detailed reporting on network and email traffic
- By using the NetBox to NetBox (with compression) or the NetBox remote access systems to remotely connect to your network

Prevent Misuse of Your Internet Connection by Staff or Visitors

- By monitoring Internet usage
- By monitoring email usage
- By utilizing internet authentication to prevent access
- By using Web Content Filtering to block web pages with inappropriate, productivity wasting or potentially offensive material

Stop Unwanted
Intrusion

- With the NetBox's strong firewall and unique security measures
- With email virus and content scanning

Enjoy Peace of Mind

- You never need to worry. In addition to the many unique security features, the NetBox provides Automatic Security and Firmware updates along with Remote Management.
- Virus updates are pushed out every 2 minutes
